

Paulo Tavares

Software Engineer

👤 Profile

Hi I'm a Software engineer based in the Dominican Republic. I have worked in the industry for around 12 years and working as a remote engineer since 2018. Professionally I consider myself a proactive and research driven engineer, a team player and someone you can relay on as a contributor that will do what it takes to take your project to the finish line from any stage. Feel free to contact me at my email or Linked In if you want to have a chat about how er can work together :)

🎓 Education

Associate in Computer Science, Farmingdale State College, Farmingdale, Long Island, NY
September 2012 — December 2013

Associate in Software Development, Instituto Tecnologico de las Americas (ITLA), Boca Chica, Dominican Republic
January 2013 — July 2015

📌 Courses

Microsoft C# Specialist, Microsoft Certified Professional
Microsoft Certified Professional (Web Development), Microsoft Certified Professional
Web Developer Certified, W3Schools

👥 Roles

Web Engineer , Frontend/Backend
I am pretty comfortable working in web development. It has been my "default" position since day one. I have plenty of experience developing web apps working on the frontend or the backend using Javascript based frameworks like React, NextJs for frontend development and NodeJs frameworks like NestJs, ExpressJs and Koa for the backend. I'm also well versed at developing web applications in DotNet with ASP.NET Core and Blazor.

Backend Engineer, On premises and cloud
I also have a lot of experience working in the back end. I am proficient at developing back end solutions either Monolith, Distributed or Serverless. I have worked with frameworks Such as NestJs and Express, Serverless framework, AWS Lambda and Azure Functions. I also have experience working in backends for IOT and gaming driven projects using Actor models such as Microsoft Orleans.

English

Skills

Javascript/Typescript
React (Dom/Native/NextJs)
Serverless (Serverless Framework/AWS Lambda/Azure Functions/ OpenFaas)
Node (ExpressJs/NestJs/Koa)
Dotnet (AspNetCore/Blazor/Orleans)
SQL (MSSQL/PostgreSQL/MySQL)
NoSQL(MongoDb/CosmosDB/Dynamo Db)
Azure (Development/Devops)
AWS (Development/DevOps/Architect)
Google Cloud(Developer/DevOps)
Python(Flask/Dash/Django)
Docker
Kubernetes

Devops Engineer, For Azure or AWS

I can also work supporting development and operation teams as a DevOps engineer. I have plenty of experience building pipelines with Github Actions, Azure Devops, GitLabs CI and Team City. I'm also well-versed at working with infrastructure as Code solutions such as Terraform, Pulumi and AWS CDK. Finally while I don't consider myself an expert in Docker and Kubernetes I can use it pretty great for deploying applications both on premises and on the cloud.

Software & Solutions Architect

Software and Solutions architecture is the career I feel walking towards. It is my professional goal to one day be able to have either of these positions as my default role to look for employment. I've taken every opportunity I've got to work on these roles and throughout the year I've been able to design migrations of legacy, monolith systems to modern distributed solutions. I've had the chance to work on organizing and moduling entreprise-wide solutions from the software architecture to the operations of the users that wil end up depending on this software. I can workshop service blueprints, business plans for software oriented projects, C4 views for software architecture and more.

★ **Projects**

Principal Engineer, Pintamax

April 2023 — March 2025

Designing and Developing an ECommerce site for a company in the painting and home improvement industry.

My Roles: Technical lead, Fullstack engineer

Stack: React/Typescript, NextJs, Shopify, AWS

DevOps Engineer, Ed-Fi

June 2022 — January 2023

Adapting legacy applications, containerizing and developing infrastructure as Code so they can be deployed to AWS and Azure.

Responsibilities: DevOps Engineer, .Net Engineer

Stack: AWS, Azure, DotNet, Docker, Terraform

CTO, Lead Engineer, Zuro Capital

May 2021 — June 2022

Leading the organization of the IT department and the development of applications and solutions for a hedge fun based in Santo Domingo.

Responsibilities: CTO, Lead engineer, Blockchain engineer

Stack: React with Typescript, Metamask, Solidity

ECommerce(Shopify/Prestashop/WooCommerce)

CMS
(Strapi/Wordpress/Contentful)

Automation(Puppeteer)

Testing(Cypress/Jest)

Integration Engineer, Scratchpay

October 2021 — December 2021

Integrating Scratchpay payment gateway solution with legacy systems development for the veterinary and petcare industry.

Responsibilities: Integration Engineer, .Net Engineer

Stack: Net35, IL, Javascript

Fullstack Engineer, LeapApp

February 2021 — August 2021

Developing an App for event planning and reservation for an audience based in the Toronto Metropolitan Area

Responsibilities: Frontend Engineer, Backend Engineer, Data Engineer

Stack: DotNet, Xamarin, ASP.NET, Azure SQL

Employment

Shopify engineer at Kibernet/Stride

August 2023 — November 2024

worked with Kibernet as a Software engineer specialized in Shopify and Node for Stride. A company dedicated to online education in the US. I ended up adding significant contributions to their integration with Shopify and a Migration to their headless storefront

My Roles

- Fullstack engineer
- Shopify API Subject matter experts

Skills:

- AWS
- Shopify
- Node
- React
- GraphQL
- Remix
- NextJS
- Hydrogen

Solutions engineer at Symphony.is, Remote

May 2022 — October 2023

I was hired as a founding member of the Remote Hub for Symphony.is. A German based company who started hiring remote workers from around the world during the pandemic. My responsibility was mainly helping clients understand their needs in terms of technologies and people by working side by side developing their software.

Responsibilities: Tech lead, Team lead, Fullstack engineer

Stack: Javascript/TypeScript, React/NextJs, AWS/Serverless, Python/Dash

Software engineer at X-Team, Remote

March 2021 — May 2022

Worked with X-Team as a fullstack Javascript in their projects. I mainly worked with clients that required an engineer experienced on integration with Content Management Systems and needed to migrate to headless solutions so they can have more freedom customizing their frontend. I also contributed heavily to their internal systems developing several features still used to this day.

Responsibilities: Fullstack Engineer

Stack: Javascript, TypeScript, React, PHP, Strapi, Shopify, Wordpress, Contentful, AWS

Software engineer at Admios, Remote

August 2020 — March 2021

A Latin-American company focused on building agile software development teams for their clients mainly based in the US. I worked with them on several clients in the Job listing industry and Shared based voting for public companies

Responsibilities: Backend engineer, Automation Engineer, DevOps Engineer.

Stack: DotNet, ASP.NET Core, Dapr, Azure, Terraform

Backend Engineer at Bember, Remote

May 2019 — July 2020

Bember is a company based in Norway specialized in the EV charging industry. I worked with them building an IOT backend to manage their EV charging stations instead of instrumentation, management and marketing.

Responsibilities: Backend engineer, Junior Software Architect, DevOps Engineer

Technologies: DotNet, ASP.NET Core, Blazor, Microsoft Orleans, Azure

Lead Engineer at ERCBPO, Santo Domingo

September 2015 — May 2019

ERCBPO is an American based company specialized in Debt collection and Customer service. I Joined as a member of their new dedicated development team and work with them as a Lead engineer designing and developing the migration of their legacy system to a distributed, scalable system build with Modern technologies.

Responsibilities: Lead Engineer, Team Leader, Backend Engineer, Platform engineer

Technologies: DotNet, ASP.NET Core, Azure, Docker, Kubernetes, NSServiceBus
